

AMC Detailed Explanation Why the 500k Floor is Mathematically Possible

By: u/skyphoenixx

Detailed Explanation Why the 500k Floor is Mathematically Possible

DD

I hear too many apes saying even 100k is an unhinged fantasy. These apes are the logicians of the world and need facts and figures based in reality. Fair enough. Luckily I can back it up with left-brain data.

My first point is, since when is any of this realistic? The hedge funds started this fever dream by creating an estimated 2+ billion counterfeit shares. THAT is what is completely unconscionable and *should* be impossible but that is another discussion. For every redonkulous action there is an equally retarded REaction...it's, like, physics. Duh.

The biggest flaw with the '500k CaN't HapPeN BeCAuSe ThAt'S 10x aLL ThE MoNEy iN ThE WorLd!!!' argument is that it usually comes from multiplying the 493,000,000 shares outstanding by \$500k. Yes, that would be \$246.5 Trillion, which is ridiculous because that would mean we shoot right up to 500k and every ape has days worth of opportunities to sell at that price point alone. **That is naïve misinformation and after this post it is shill FUD.** It is safe to say that there will be a run up and a run down with plenty of bumps in between, but definitely not a stagnant plateau for days/weeks right at \$500k. Come on, we're retarded but not stupid!

This is where the Geometric Mean comes in

[This link explains the Geometric Mean in more detail](#)

Long story short, the geometric mean is used in finance to help calculate returns over time. Say you made \$1500 off of a \$1000 investment over ten years. How does each year break down, and what is the average per year? That is a similar situation to apes taking profits. **I cannot stress this enough, every ape needs to understand what the geometric mean is.** Save this post and direct shills and unconfident apes to it to educate them. I am fucking tired of hearing the asswipe argument that the payout would be more money than the entire world has.... #SpamGeometricMean

Imagine, for the sake of argument, this is roughly what the MOASS might look like when we get our tendies:

MOASS Price Action

	X	Y	
1	1	20	
2	2	50	
3	3	100	
4	4	500	
5	5	1000	
6	6	5000	
7	7	10000	
8	8	50000	
9	9	100000	
10	10	500000	
11	11	750000	
12	12	1000000	
13	13	750000	
14	14	500000	
15	15	100000	
16	16	50000	
17	17	10000	
18	18	5000	
19	19	1000	
20	20	500	
21	21	100	

Using These Plot points, for reference

This simulation peaks at \$1 million and has all that area underneath the blue line that equals profits for apes who own the entire float multiple times over. Each of the points equals one of 21 time units that could be days, weeks, who knows. Basically, how many bricks make up the pyramid? There are far more in the first few bottom layers than the higher layers combined. Since I only have a few wrinkles, I am using [a geometric mean calculator](#).

Sample size:20

Geometric mean (\bar{x}_g): 11273.081019718

[Mean](#) [Harmonic mean](#) [Median](#) [Mode](#) [Standard Deviation](#) [Variance](#) [Mean absolute deviation](#) [Relative standard deviation](#)

[All dispersion data](#) [Box plot](#)

RESET

Geometric Mean of \$11,273.08

So with that rough simulation of a peak of \$1 million, the Geometric mean comes out to \$11,273.08 per share.

Now, there is no real way of knowing how many apes own how many shares until AA releases that on July 29th, but we can make a few guesses based on the verified 3.2 million ape figure and some data collected by our very own Matt Kohrs. Take it all with a grain of salt because it's just an estimate.

French_AMC_APE @YassineCo... · 2h ...

For 17% = 25 500 shares

For 18% = 80 460 shares

For 33% = 741 510 000 shares !

For 32% = 1 920 000 000 shares !

A total of : 2 672 106 000 shares !!!

So 900% of the official float held by the
retails investors!

#AMC #AMC100K #AMCSqueeze

NOT saying that that number of shares is accurate but it's backed up but solid logic. [Keep in mind, the total number of ape hodlers is much, much higher.](#) So again, for the sake of argument, we multiply the \$11,273.08 by the 2,673,000,000 shares owned by apes, that comes out to **\$30,132,942,840,000.** It could always be much less than that of course.

Just \$30 Trillion! But where does that money come from?

1. Citadel and friends have trillions in assets by themselves.
2. Brokers that should be held responsible for the trades that happen on their platform can feel the pain, too. They are complicit in naked shorting if they allowed us to buy counterfeit shares. They have several billion as well.
3. The Federal Reserve has never shut off the money machine anyway. You're kidding yourself if you think the US doesn't give themselves a blank check whenever they want.

Most importantly, [The DTCC is insured for \\$67 Trillion.](#) I **REPEAT**, the DTCC is insured for \$67 TRILLION. The world economy is \$130 Trillion...lol. Let's not get any ideas about bankrupting the world! Or maybe...?

So that is just insurance. I am speculating here, but my ape-y sense is tingling that **the fed will strongly encourage our friends at the DTCC to increase that insurance significantly when this heats up because 'an insurance payout' looks much better on paper than 'printing money.'** There is blood in the water. [The NSCC passed 005 to increase member premiums from \\$10,000 to \\$250,000](#), still waiting for SEC approval. This is why I think they are getting ready to increase that \$67 Trillion.

Something important that never gets brought up in DD's is the fact that once the world economy starts taking a tumble, rich people will still be pouring money into everything while it's all on discount. There will come a time when it seems like it all hit the bottom and investor confidence will go back up, basically financial CPR for hedgefunds while they are on their way out. That money will once again find it's way into the Black Hole of STONKS, and can go towards our payout. **By wealth transfer, we mean all of it.**

It just seems too good to be true... What about the GME Payout? Their floor is \$20,000,000 FFS!

GME has significantly less shares outstanding and likely nowhere near as many counterfeits but I would love to be wrong about that. :P Another ape did the GeoMean on GME and came up with an **estimated payout at a PEAK of \$20,000,000 that comes out to \$4,743,375,000,000.** [u/raught19 breakdown of GME's GeoMean payout.](#) It's a little outdated because the peak is their new floor, but you get the idea.

Conclusions and Reminders

Hedgies R Fuk.

Buy & Hodl.

Selling on the way up is for sociopathic cunts.

Bleed them dry. They were ready to bankrupt companies and put tens of thousands out of work during a pandemic. All these big players created a racket, and we need to make this epic to teach them a lesson and make the markets more fair for everyone. Blockchain, PFOF becoming illegal...one can dream.

Tell your recruits that are not obsessive reddit lurkers to go VOTE VOTE VOTE. Everyone here and new apes buying in now have until June 2nd to call their broker to get that voting information sorted out. The new vote will take place on July 29th but you can vote before then. A massive number of apes with an unimaginable number of fake shares could be the catalyst we need to rocket.

BUY MORE SHARES OFF OF PAPERHANDS AND DAYTRAITORS FOR SAFEKEEPING.

\$500k is totally, mathematically possible. We all just need diamond balls.
