

Volume Glitches around T+21 dates reveal true SI%

By: u/Criand. Posted and archived: 26/05/2021 (Day/Month/Year)

# Volume 'Glitches' Surrounding T+21 Dates. FINRA Rule of "Orders Locked In By 2:30PM". These 'Glitches' Might Be Revealing The True SI%.

Possible DD

Gonna make this quick since I'm hype AF, want to get my thoughts out, and to get more apes to discuss. Once again - I am not a financial advisor and I am not providing you financial advice.

## 0. Volume Glitches Close To T+21 Days

Let's get right to it. We've been seeing glitches once in a while of volume on the buy side. They've always confused me and STILL confuse me, but maybe it's finally coming together.

We saw a "glitch" yesterday in buy order volume. A glitch of ~63M:

May 25 Volume Glitch

And this isn't the first time it's happened. [We also saw a "glitch" on March 23](#). A buy order volume glitch of ~634M:

March 23 Volume Glitch

[And another "glitch" on February 22nd](#). A buy order volume glitch of ~94M:

Feb 22 Volume Glitch

Notice something.... interesting about the dates? Those are all **very close to T+21 dates**. For a refresh, here's the T+21 days that have happened in 2021:

- January 25
- February 24 (Glitch on February 22)
- March 25 (Glitch on March 23)
- April 26
- May 25

Ok cool, we have buy order volume glitches. What could they possibly mean?

## 1. FINRA Trade Report Processing Rule

Our fellow ape [/u/afterberner9000](#) found [a FINRA rule](#) which could explain why we're seeing things ramp up. Why we might now be experiencing T+21 a day later on T+22. Here's a link to their comment:

[https://www.reddit.com/r/Superstonk/comments/nkwhq3/the\\_dd\\_has\\_once\\_again\\_proven\\_to\\_be\\_true/gzfa2o5/?utm\\_medium=android\\_app&utm\\_source=s hare&context=3](https://www.reddit.com/r/Superstonk/comments/nkwhq3/the_dd_has_once_again_proven_to_be_true/gzfa2o5/?utm_medium=android_app&utm_source=s hare&context=3)

Essentially, their trade will become 'locked in' (forced) **if it remains open by 2:30PM**. So what does this mean?

(Speculation coming) Need more apes to discuss.

1. **Zoom back to February 22nd.** They get a glitch of 94M **at the end of the day**, meaning the order is actually for February 23rd.
2. By 2:30PM February 23rd, they need to close that order or it gets locked in. They **need to can-kick this order or it will be forced the next day (Feb 24th)**.
3. They can-kicked as much as possible but didn't close the entire order of 94M. 2:30PM February 23rd hits, and their buy order is locked-in for the next day, February 24th.
4. February 24th hits and the remainder of the buy order goes through - resulting in a huge spike in price.

Apply this now to March 23rd glitch. They can-kicked tons of that volume order by March 24th. And then, March 25th surge happened. What could this mean for the glitch we just saw? **Well, if the theory is right and the rule applies here, then they need to can-kick a 63M buy order by EOD May 26th (today) or let it go through.**

## 2. Volume Glitches = Portion of SI%?

If these are truly buy orders of their can-kicking, then Jesus Christ, what the hell did they do?! I'll provide you with some crazy numbers.

We don't know how much their SI% is, but these glitches might be a big, big hint.

The orders are very spread out, so they could be overlapping here and not be cumulative. So for the sake of this post, we'll assume the **634M** volume order on March 23rd is what they're can-kicking off of their balance sheet. **This doesn't even include their current short position**. But let's say that it is the currently reported 20% SI% plus the 634M order. Know how much SI% just that gives us?

20% SI @ 55m float = 11M

11M + 634M = 645M

645M / 55M float = 11.72

SI% From March 23 Glitch: 1,172%

Oh boy.

But wait, there's more!

There was another glitch on March 25. Either this is what they are can-kicking, or this throws the entire theory out the window. Because it is a terrifyingly large number and might not even account for overlap of can-kicking. If this is what they're can-kicking, then [what the hell is this "glitch" on March 25?](#)

March 25 Volume Glitch

Yeah, that's 1.85 BILLION. If these orders are their true short positions that are being suppressed, then that comes out to be..

SI% From March 25 Glitch: 3,383%

These guys are going to break the damn stock market if this is true.
